

Execution:

Implement a C++ application for the following scenario:

Assumption: Weightage for Internal, Attendance and External are 45, 5 and 50 respectively.

Inputs are student details, subject id, % of attendance, % of marks obtained for each subject in Internal and external.

1. **Compute** the grade for a subject for a student.
2. Compute the class average for a class of 5 students for the subject.

Spot:

Modify the code to do the following:

Compute the grades for 3 subjects and GPA for a student.
