

## **C Programming Lab**

**Date : 18-11-2024**

- 1) Write a program to create a structure called student with attributes name, regno, array of subjects marks, total, rank. Write function to compute total for each student. Another function to compare students total and return the regno who got highest total.
- 2) create a structure time with attributes hr, min, sec. Write function for the following:
  - A) add two times
  - B) compare two time units and return time which come early.
  - C) subtract two times
